

PAPÉ PROVIDES GPS SUPPORT

Papé Machinery, Eugene, Ore., has a GPS product support team that can help customers maximize the technology's potential. According to Papé, GPS can track a machine's largest operating expense, fuel consumption, to see how hard operators are working a machine; identify which machines in a fleet are underutilized by reviewing the amount of time machines are working at different load levels; find the exact location of a machine and send driving directions to service technicians and operators; provide instant alerts when a machine is experiencing trouble; track stolen equipment.

Papé Machinery is a dealer of John Deere and Hitachi equipment throughout the West. Both equipment lines offer GPS systems: John Deere's JDLink and Hitachi's ZXLink.
